

Introduction of System Design Document

During this project we have worked on various diagrams for our remote car start-up app, QuickStart. In our Design Level Class diagram, we have six classes including User, Car, Climate, Error, and Schedule. Under these classes it displays attributes data types, multiplicity values, methods, and parameters. Then we have our Object Statechart Diagrams that display all our possible object states like events and activities. Next our System Sequence Chart describes how operations are carried out and interactions between objects. Lastly, we have our pseudocode document that gives a more detailed description of what a computer program should be able to do.
